

SCHOOLS DIVISION OF BAYUGAN CITY • DEPARTMENT OF EDUCATION

School Management System

Module-by-module walkthrough: every workflow, status, and rule in the system.

Part 2 of 2 — **Detailed Flow of Modules & Functionalities**

AGENDA

Module Walkthrough

A. ACCESS & LEARNERS

1. Authentication flows
2. Enrollment wizard
3. Transfer workflow
4. Enrollment lifecycle & promotion
5. Students, sections & subjects
6. Schedules & rooms

B. ACADEMICS & MEASUREMENT

7. Attendance
8. Grade entry & class record
9. Report cards
10. DepEd forms SF1–SF10
11. Examinations & TOS
12. Item analysis & MPS

C. LEARNER DEVELOPMENT

13. Learner health (SF8)
14. ECCD assessments
15. CRLA / Phil-IRI / RMA
16. ARAL intervention & tutor workspace
17. Adviser tools (anecdotal, cardex)
18. Evaluations

D. RECORDS, RESOURCES & ADMIN

19. Books
20. Staff & rooms
21. Form 137 / document requests
22. Manage requests
23. Settings & locks
24. Portals: teacher, student, division, public

Authentication Flows

Unverified accounts are held at a verification page. Users without an assigned school are blocked from school modules — only division admins may operate school-less.

Learners never need an email account. Their session is fully separate from staff authentication, and all portal data flows through server-side actions.

Role-based routing

School heads / admins / registrars / librarians get the full module sidebar • teachers get the teacher workspace • ARAL tutors get the tutor workspace • division admins get division modules • the public site needs no login at all.

Enrollment Wizard — Step by Step

Uniqueness is enforced per learner, school, school year and semester — the same learner can never hold two active enrollments for the same period at one school.

Inter-School Transfer — Detailed Workflow

There is no bypass: even learners already marked transferred-out at their origin go through the record request flow. Teachers can also initiate transfer-out with reason and destination school recorded.

Enrollment Lifecycle, Promotion & Graduation

Status	Meaning
active	Currently enrolled and attending
completed	Finished the school year
promoted / retained	Year-end decision; drives next year's grade level
graduated	Finished the terminal grade; record locked by trigger
transferred_out	Moved to another school (set on transfer approval)
dropped	Left during the school year
pending_transfer	Transitional state during transfer processing

Year-end processing

1. Advisers/registrars mark learners promoted, retained or graduated
2. Promoted & retained learners are re-enrolled into the next school year in one atomic step
3. A **promotion deadline** (set in Settings) closes the window; graduation locks prevent edits afterward

Consistency by design

A database trigger keeps each learner's overall status in sync with their latest enrollment, and status changes are also available manually for corrections via a Change Status action.

Students, Sections & Subjects

Students module

- Master list of all learners in the school with search & filters
- Full profile: personal data, guardians, LRN, enrollment history
- Jump-off point for records: grades, health, attendance
- Excel export of filtered lists

Sections module

- Sections created per grade level and school year
- An **adviser** (teacher) is assigned to each section
- Learners join sections through their enrollment record
- Section roster feeds attendance sheets, grade tables and SF forms

Subjects module

- Curriculum subjects defined per grade level
- Subjects are linked to sections via schedules (teacher + time + room)
- Grade records are keyed by learner × subject × section × grading period × school year

Schedules & Rooms

Building a class schedule

The subject-schedule record is the system's source of truth for **who teaches what** — it is what authorizes a teacher to encode grades and attendance for a class.

Rooms module

- Room inventory per school (name, capacity, type)
- Rooms are attached to schedule entries, giving each class a physical location
- Helps identify conflicts and utilization when planning the timetable

Where schedules surface

- Teacher dashboard — teaching load table (with advisorship & ARAL columns)
- Grade entry — validates the teacher-subject-section link
- Reports — SF7 and related staff/load forms

Attendance

Grade Entry & Class Record

Report Cards & Core Values

Stored, not one-off

Core-value ratings are saved per learner per school year, so cards can be re-printed identically at any time.

General average & remarks

Final averages and promoted/retained remarks come straight from the grade records — the card is a view of the data, never a separate encoding job.

Configurable thresholds

Grade-point descriptors and passing thresholds are configurable, keeping cards aligned with DepEd guidance.

DepEd School Forms (SF1–SF10)

Form	Content	Data source
SF1	School register	Enrollment + learner profiles
SF2	Daily attendance report	Attendance module
SF3	Books issued & returned	Books module
SF4	Monthly learner movement	Enrollment status changes
SF5	Promotion & level of proficiency	Grades + year-end statuses
SF6	Summarized promotion report	Aggregated SF5
SF7	School personnel assignments	Staff + schedules
SF8	Learner health & nutrition	Learner Health module
SF9	Learner progress report (report card)	Grades + core values
SF10	Permanent academic record	Grades across school years

How generation works

1. Choose form, school year, and section or learner
2. The system assembles live data into the official layout
3. Export as PDF for signing and submission

SF10 historical encoding

Grades earned before the system existed (or at non-system schools) can be encoded — with scanned attachments — so the permanent record is complete.

Division submission

Schools submit selected reports to the division through the reports module, giving the division office consolidated visibility.

Examinations — TOS & Exam Creator

MPS — Mean Percentage Score

1. Teacher enters MPS per subject, section & quarter

Number of examinees, total score, computed mean percentage

2. Mastery level derived

Score bands map to DepEd mastery descriptors

3. School-level MPS report

Consolidated by subject / grade / quarter for the school year

Why it matters

MPS is DepEd's standard indicator of subject-area performance. Encoding it beside grades and item analysis puts achievement monitoring in one place.

Where it appears

- Teacher workspace — per own subjects/sections
- School module — school-wide consolidation
- Division reports — cross-school comparison

Learner Health (SF8)

ECED Assessments (Kindergarten)

Purpose

The Early Childhood Care and Development checklist measures school readiness and developmental progress of kindergarten learners — a DepEd requirement for the kindergarten curriculum.

Integration

- Lives in the teacher workspace beside grades and forms
- Results stay with the learner record and are shared on approved transfers

Reading & Numeracy Assessments — CRLA, Phil-IRI, RMA

ARAL Intervention Program & Tutor Workspace

Adviser Tools — Anecdotal Record & Learner Cardex

Anecdotal Record	Learner Cardex
1. Adviser selects a learner from the advisory class	1. Adviser opens the cardex for the advisory section
2. Incident / observation logged with date & details	2. Consolidated card per learner: profile, grades, attendance & key records
3. Entries accumulate into a dated behavioral record	3. One-stop reference during the school year

Supports guidance referrals and parent conferences with an objective, dated log.

Both tools are exclusive to section advisers, inside the teacher workspace.

Evaluations — 360° Feedback

Books — Allocation, Issuance & Return

Staff & Rooms Administration

Staff module

- Personnel registry per school: teaching & non-teaching staff
- Profile, position and assignment details
- Source for SF7 (personnel assignments) and evaluation targets
- Linked to user accounts so roles map to real personnel

Rooms module

- Room registry: names, types, capacity
- Attached to subject schedules for class locations
- Basis for utilization and conflict checking in timetabling

User management

- Division admins create and manage user accounts across schools
- Each account carries a role and a school assignment
- New accounts pass through verification before gaining access

Form 137 / Document Requests (Public)

Manage Requests — One Workspace, Three Tabs

Incoming record requests

Requests **from other schools** for learners transferring out of this school.

- Approve → record access granted; local enrollment marked transferred-out
- Reject → data access denied; learner remains enrolled at destination

Outgoing record requests

Requests **this school sent** when enrolling transferees.

- Status tracking: pending / approved / rejected
- **View Records** opens the transfer record viewer for approved requests
- **Remove Student** if records disqualify the transferee

Document requests

The public Form 137 queue (previous slide) managed alongside transfer requests, so the registrar works from a single screen.

Transfer Record Viewer

Read-only view of the origin school's data for an approved transferee: grades per school year and full enrollment history — enough to place the learner correctly and complete SF10, without ever editing another school's records.

Settings & Data Protection

Record edit locks

Lock grades and records of **previous school years** so closed years cannot be silently altered. A separate toggle governs whether grades of already-promoted learners may still be edited.

Promotion deadline

A cut-off date after which promotion/retention decisions can no longer be changed — enforced at the database level by triggers, not just the interface.

Principal configuration

School principal's name and title maintained here — automatically used as signatory on report cards and official forms.

Security & integrity throughout the system

- **School scoping** — every query is filtered to the user's school; no role except division admin sees across schools
- **Row-level security** — transfer record access is enforced in the database, not just the interface
- **Teacher authorization** — grade edits require a schedule or advisership link, checked server-side
- **Input hardening** — user search input is sanitized against injection; no unsafe type coercion in code standards
- **Graduation locks & status-sync triggers** — final records are protected and kept consistent automatically

Teacher Workspace — Detailed Tour

Dashboard

Teaching load table: subjects & schedules, advisory section, and ARAL tutoring assignments in one view.

My Sections & Students

Rosters for advisory and handled sections; transfer-out initiation for advisers.

Academic tools

- Grades — quarterly encoding with authorization checks
- Class Record — component scores & computed grades
- School Forms — section-level SF generation
- MPS — per subject/section/quarter

Assessment tools

- Assessments — CRLA / Phil-IRI / RMA scoresheets
- Examinations — TOS & exam creation, item analysis
- ECCD — kindergarten development checklists

Other duties

- Books — issue to learners, returns, return-to-manager
- Anecdotal Record & Learner Cardex (advisers)
- Evaluations — rate the school head; view own results

Student Portal & Public Site

Student portal flow

1. Sign in with LRN + date of birth

2. Dashboard — profile, section, school year at a glance

3. Grades — own grades per subject & grading period, read-only

4. Evaluations — answer active teacher evaluations (1–5 stars), one submission each

Public site (no login)

- Browse the division's schools directory
- Learner lookup
- Submit Form 137 / document requests and track status

Design choices

- Learners need no email — LRN + birthdate is enough
- Everything is read-only except evaluation answers
- All data flows through verified server actions — learners can only ever see their own records

Division Administration

The division admin is the only role that operates without a school assignment — everyone else is locked to exactly one school.

Everywhere in the System

Notifications

In-app notification bell alerts users to new document requests, transfer record requests and responses.

System guide

A built-in help dialog explains each module's workflow to users right where they work.

Exports

PDF for official DepEd forms and report cards; Excel for lists and working reports.

School-year awareness

A consistent school-year selector across modules; history is preserved as years roll forward.

One learner record, every module

Enrollment is the backbone: sections, attendance, grades, health, assessments, interventions, books, forms and transfers all hang off the same learner + school year record — encoded once, reused everywhere.

THANK YOU

School Management System

24 integrated modules • 6 user roles • SF1–SF10 compliance • transfer-safe learner records • assessment-driven intervention — for the Schools Division of Bayugan City.

Questions & live demonstration
